EXPERIENCE

- **University of Illinois at Urbana-Champaign** — Urbana, IL
  Research Assistant — Aug 2020 - Present
  - Conducted research on recommender systems and graph neural networks, focusing on addressing sparsity challenges, including long-tail item representation learning.
  - Investigating LLM-enhanced recommender systems and the causal aspects of recommender systems.
- **Amazon - Retail - International Machine Learning** — Seattle, WA
  Applied Scientist Intern — May 2024 - Aug 2024
  - Designed a multi-modal item representation learning framework that incorporates item-item relationships and diverse content modalities to enhance substitute and complementary item recommendations.
  - Demonstrated up to a **39.2**% improvement over current methods across five real-world datasets, highlighting its effectiveness, particularly in cold-start and sparse data scenarios.
- **Amazon - Alexa AI - Entity Resolution** — Cambridge, MA
  Applied Scientist Intern — May 2022 – Aug 2022
  - Created a cross-domain representation learning framework for entity-based personalization, enabling a unified user representation across multiple catalog domains.
  - Delivered over a **5**% improvement compared to the existing system, validated through both internal and external datasets for recommendation applications.
